

## Pre-Installation Checklist

We've put together this handy Live Streaming Checklist to help you understand the requirements for getting started with one of our Live Streaming Solutions.

### Internet Connection

You will need a fast, reliable internet connection without any bandwidth restrictions. This would ideally be a minimum of 20Mbps upload speed. If you don't know how to check this, contact your internet provider or talk to one of our experts.

### Ethernet Connection

A hard-wired Ethernet connection to your recording device of choice is essential. If you're unsure on which Ethernet cable is right for your device, please contact one of our experts.

### Recording Area

To deliver a quality live stream you will need a well-lit recording area. This area must be big enough for you to perform your class, taking into account how far you need to be from your recording device to be completely in frame.

### Recording Device (Plug & Play Only)

Your recording device could be an:

- iPad or other preferred tablet of choice
- Laptop
- Desktop computer.

#### [HT Live Streaming Plug & Play](#)

Your recording area could be a studio, office space or even your living room. You will need somewhere to place your device, such as a table or a tripod. You can talk to us about providing a tripod with your HT Livestream Plug & Play Kit.

#### [HT Live Streaming Install Solution](#)

The area should be a space which you are happy to be permanently set up to record in. You will need somewhere to place the laptop and mixing console, such as a table or desk.

#### [HT Live Streaming Studio Pro](#)

Your recording space should be a large area that you are happy to be dedicated to video content production. An additional space is required for the control equipment.

For optimal performance, we recommend that the device is no older than 3 years. If you are working from a laptop, make sure that it has full admin access so that any necessary drivers and software can be installed. Your laptop will also need a minimum of 2 free USB ports, with one of these ports being USB 3.0.

Get in touch with us if you are unsure if your device would be capable of live streaming.

### Streaming Platform

You will need to know which streaming platform (such as Zoom) you would like to use. Knowing which platform you're using allows our technicians to pre-configure your kit appropriately.

### Power Outlets

Make sure that you have enough power outlets nearby to power the recording device and mixing console. If required, we can provide additional extension reels with any of our solutions.

## Contact Us

If you're still unsure that you have everything you need to get started or would like to discuss any of our HT Live Streaming Solutions, talk to one of our experts today.
